

Background Information on PhD. Program in the field 3.3.16 Business Economics and Management, Study Program Business Management

The imperative of the Doctoral Program in Business Management stems from steady increase in the knowledge amassed within the growing knowledge society and need to apply the knowledge in business practice. The increase has been caused by convergence of multiple factors, among which the most crucial one is globalization of economy, unprecedented growth of cross-border business operations, intensified competition, and development of information and telecommunication technologies, resulting in change in the composition of human resources. The use of new findings and knowledge is critical for development of business strategies, innovation of most commodities traded in global markets, and application of new trading techniques.

On this account, new findings and knowledge have become necessary conditions of growing economy and its individual components – individual enterprises. Yet, findings and knowledge are not only to be simply possessed but also to be systematically and effectively used and developed. Two consequences follow from the above: the increase in the social role played by science and research, as well as the necessity of putting the acquired findings and knowledge into practice as quickly and efficiently as possible.

The School of Management (VŠM) is convinced that they are responsible for educating professionally oriented specialists. The study program of Level 3 is the logical accomplishment of a gradually designed doctoral program in Business Management at the School of Management (VŠM). Level 1 and 2 of the program have been offered by the School of Management (VŠM) since 2000.

Over the preceding period, the School of Management (VŠM) has acquired valuable experience, highly skilled faculty staff, and a high number of international contacts. The indicated realities and experience acquired so far have led to the situation where the School of Management (VŠM) has enough personal and material resources at its disposal to successfully participate in the preparation of top specialists capable of contributing to further development of Business Management by their scientific research and achieving worldwide relevant scholarly results.

The doctoral study at the School of Management shall be offered under Law No. 131/2002 Coll. on Higher Educational Establishment and on amendment and supplement of certain laws as commanded. The study shall be oriented towards earning an academic title "philosophiae doctor" ("PhD.") in the field 3.3.16 Business Economics and Management, in the study program Business Management, and it shall respect continuity in terms of content with already accredited Bachelor's and Master's programs in Business Management at the school.

A researcher in the field 3.3.16 Business Economics and Management – management PhD. – specializing in Business Management:

- will be skilled in using research and scholarly methods for improvement of functions of management,
- will be able to conduct independent and creative research work,
